Headers, g-Machine System

Available for both small-block and big-block Chevy engines with standard exhaust-port locations, Chassisworks' thermal-barrier-coated, long-tube headers ensure a perfect-fit exhaust solution for our direct bolt-on g-Machine suspension systems. Header and welding fixtures were created from a complete-chassis computer model to ensure precise tube placement with ample clearance provided for steering shaft, clutch linkage, motor mounts, and frame rails, without negatively affecting ground clearance. Primary tubes are lightweight yet sturdy, 16-gauge, CNC-mandrel-bent, steel tubing, free from obstructive butt welds and sized for high-horsepower levels easily achieved with modern engine combinations. Tube sizes: 1-3/4" primaries with 3" collectors and 2-1/4" reducers for small blocks; 2" primaries with 3-1/2" collectors and 2-1/2" reducers for big blocks. Header and collector flanges are single-piece, 3/8"-thick plate steel for improved sealing, with individually laser-cut mounting holes and weight-reduction features to avoid unsightly and warp-prone lead-in cuts to each hole. Headers can be ordered as bare steel or with a special chemical-resistant, thermal-barrier, metallic-ceramic coating applied inside and out to reduce radiated heat and improve exhaust-flow velocity. The dual-process internal coating is boost- and nitrous-safe with a maximum temperature limit of 2000° Fahrenheit. Factory finish is a bright metallic but can be easily polished for a more chrome-like appearance. Kits include ARP 12-point header bolts, graphite-impregnated expanded-metal core gaskets, and trim-to-fit collector reducers and hardware.
